

Hackathon - Salesforce

Anbang Xu

1. Name: Task Scheduler
2. Tagline: receive events from different resources, run algorithm to set up schedule based on maximize the time resource and track your life
3. Description: three steps and three goals of this project are 1. to utilize the network resources to make people communication much easier. ex. User can get assignment from company or get appointment from friends or families directly from this project. 2. Make use of the computing speed and intelligence of the computer. ex. based on user's free time slot, the urgent or important level of the event, this application will automatically generate the best schedule for user. Ideally, this app will also provide a nice UI for user to modify the schedule in any time for any need. 3. Analyze the data from user, help users track their life and provide some suggestions. ex. Use A spends 30% time in work, 30% time in some organizations and 40% time in family. Gradually the data will become bigger and bigger, the analysis result will become much more meaningful.
